What is Dash?

Installing Dash

In RStudio, run:

```
install.packages("remotes")
remotes::install_github("plotly/dashR",
                         upgrade = "always")
```

About Dash syntax

The three bits of codes are equivalent:

```
app <- dash_app()
app %>% set_layout(
app %>% run_app()
```

```
dash_app() %>%
  set_layout(...) %>%
  run_app()
```

```
app <- dash_app()
set_layout(app, ...)
run_app(app)
```
